

Indice

OVERVIEW

Functional anatomy of bone

Gastone Marotti

Introduction

Histogenesis

Macroscopic features

Microscopic structure

Bone cell functional relationships and signaling

Conclusions

References

Physiology of the bone

Alberto Angeli, Andrea Dovic

Introduction

Bone structure and function

Bone turnover - The remodeling cycle

Bone turnover - Biochemical markers

Bone turnover - Histomorphometry

Regulation of osteoclast number and activity

Regulation of osteoblast number and activity

Osteoimmunology

Hematopoietic stem cell niche and cross-talk between bone cells and stem cells

Bone as the calcium reserve

An overview of osteoporosis

Conclusions

References

Physiopathology of bone metastases

Francesco Bertoldo, Emanuela Flamini, Daniele Santini, Toni Ibrahim

Introduction

Bone metastasis beginning and development

Origin of evident osteolytic lesion

Pathogenesis of osteoblastic lesions

References

SPECIFIC ISSUES

Primitive bone tumors

Roberto Casadei, Mario Mercuri

Introduction

Epidemiology

Imaging diagnosis

Biopsy and anatomopathological diagnosis

Clinical manifestations

Staging

Treatments

Conclusions

References

BONE METASTASES

Natural history and epidemiology

Rossana Berardi, Chiara Pierantoni, Mario Scartozzi, Stefano Cascinu

Introduction

Bone metastases

Conclusions

References

Imaging diagnosis

Lorenzo Faggioni, Davide Caramella, Carlo Bartolozzi

Introduction

Conventional X-ray

Computed tomography

Magnetic resonance imaging

Conclusions

References

Anatomopathological diagnosis

Franco Bertoni, Patrizia Bacchini, Krishnan Unni

Introduction

Cytological diagnosis: medullary aspirate and bone aspirate

Histological diagnosis: bone marrow and bone biopsy

Biomolecular characterization

Problems in diagnosis and conclusions

References

Clinical manifestation

Toni Ibrahim, Laura Mercatali, Roberto Casadei, Roberto Sabbatini

Introduction

Pain

Pathological fractures

Spinal cord compression

Hypercalcemia

Medullary suppression

Systemic effects

Conclusions

References

Pain and bone metastases

Oscar Corli, Marco Maltoni

Introduction and epidemiological aspects

Pathophysiology of metastatic bone pain

Pharmacotherapy for cancer pain

Nonpharmacological treatments

Breakthrough pain or episodic pain

Conclusions

References

Pharmacological treatment

Valentina Guarneri, Federica Bertolini, Stefano Cascinu, Toni Ibrahim

Introduction

Specific antitumor treatment

Specific bone metastases treatment

Medical treatment of spinal cord compression

Medical treatment of hypercalcemia

Medical treatment of medullar suppression

Conclusions

References

Radiotherapy of bone metastases

Filippo Bertoni, Paolo Antognoni

Introduction

Radical treatment

Palliative treatment and prevention of bone complications

Conclusions

References

Nuclear medicine

Giovanni Paganelli, Concetta De Cicco

Introduction

Diagnostic imaging

Radiometabolic treatment

Conclusions

References

Interventional radiology

Filippo Calzolari, Valeria Allegra Pupillo, Enrico Petrella

Introduction

CT-guided biopsy

Cementoplasty

Percutaneous vertebroplasty

Kyphoplasty

Embolization

Radiofrequency thermoablation

Other procedures

Locoregional therapy

Conclusions

References

Surgical treatment

Roberto Casadei

Introduction

Vertebral column

Pelvis

Limbs

Conclusions

References

Rehabilitation treatment

Maria Rosa Strada, Raffaella Palumbo, Giovanni Bernardo

Introduction

Rehabilitation of patients with vertebral column disease

Rehabilitation of patients with upper extremity disease

Rehabilitation of patients with hip and lower extremity disease

Conclusions

References

Bone metastases of unknown origin

Roberto Sabbatini, Stefano Cascinu, Alessia Ferrari, Toni Ibrahim

Introduction

Epidemiology

Diagnosis

Therapy

Conclusions

References

BONE HEALTH IN OSTEO-ONCOLOGY

Cancer treatment-induced bone loss

Antonio Frassoldati

Introduction

Endocrine therapies and bone loss in breast cancer

Endocrine therapies and bone loss in prostate cancer

Management of cancer treatment-induced bone loss

Conclusions

References

RESEARCH AND PATIENT MANAGEMENT IN OSTEO-ONCOLOGY

Research in osteo-oncology

Epidemiology

Lauro Bucchi, Toni Ibrahim

Introduction

Descriptive epidemiology

Analytical epidemiology

Incidence of metachronous metastases

Population-based clinical epidemiology

Hospital-based clinical epidemiology

Epidemiology of cancer pain

Metastatic cancer outcomes research

Economics of metastatic cancer

Health services research

Biological studies

Emanuela Scarpì, Emanuela Flamini

Diagnostic studies

Introduction

Study designs for diagnostic tests

Study design of target oriented diagnostic tests

ROC curve and area under the curve

Critical evaluation of the evidence about diagnostic tests

Preclinical pharmacology

Introduction and overview

Regulatory requirements

Preclinical drug development

Pharmacology

Toxicology/drug safety

Drug formulation development

Research of prognostic and predictive factors

Biological studies in osteo-oncology

From bone reabsorption markers to therapeutic targets in bone metastasis

From preclinical studies to clinical trials

Endothelin-1

Cathepsin K

Phases of clinical trials

Oriana Nanni, Patrizia Serra

Introduction

Phase I

Phase II

Phase III

Phase IV

Methodology of clinical research in patients with bone metastases

Pain assessment

Quality of life assessment

Bone pain and quality of life in bone oncology

Conclusions

References

Multidisciplinary organization models in osteo-oncology

Toni Ibrahim, Laura Mercatali, Emanuele Sacanna, Nicola Calipari

Introduction

Management of primary bone cancers

Management of bone metastases

Conclusions

References
